Dear DX'er

Thank you very much for your letter last month. This is not the first time we have gotten that far north, I feel that the reason is that our ground system is in a very low wet place, in fact some of the radials extend into a drainage ditch. and as you know this will improve the signal out put.

We utilize an ITA Xmtr (1KW day time and 500 watte night time power) the tower is 270Feet at sea level.
