Dear Wayne:

Good enough on your logging. You definitely did hear WNWI by the fact you listed a correct ID at 2:12, plus the listing of the National Emblem March, which was my first record. I figured that this was the best record to start off with, being as it was a NRC TEST. This letter is given to you as official verification of radio station WNWI on November 6, 1966.

Good show on your WKBW job. What type of a show is CAP-JAC? I can only barely hear WKBW here, as KOMA puts in quite a strong signal, as does also KMPL. Their 500 watts are blasted due north and east, and KMPL does cover 1520 quite well until they go off the air at 11:30 CST. ASure would be nice if I could type.

Hasn't DX been terrible lately. I listened this last MM and did not hear anything at all except unnn KTIS. I was the one who arranged that one. I sent him a very friendly thank you letter. I also taped most of it, but when I got the tape to WNWI to edit it, I found out that my recorder was recording too slow, as when I put it on the crown here, they come out like mice. CX was terrible, with no certain direction being favored, plus HNL. Oddly enough though, KDON was coming in for the only WC hrd. I have found out from Ev Johnson that that TT on 1410 was KQV, and not KVLB.

Rick Evans and my family are going over to Mendota this weekend to visit with Evand his family. He has a real nice set up there, with one of those corner desks with shelves out on both walls. Rick and I are taking the RX of course, but not counting them. I am giving Ev my old loop which Ray Kraul made for me a few years ago. He has just been using a longwire, and I know he will like the loop. If there is one thing that has helped me this year, it has been this loop the CE made for me. It is so directional, it still amazes me sometimes. The most significant feature is my ability to null Chicago 50kw like WMAQ, WGN, etc and hear LAs next door, plus Radio Rhumbox on 560. WIND XR is just 10 miles west of me south of Gary, Indiana.

Enough. Good luck on your WKBW show and DX.
