Dear Wayne,

I am very pleased to verify your reception of KBEQ-AM on November 18th. I'm afraid we don't have any QSL cards printed so I've sent along a couple of bumper stickers.

As you may have determined by the dual ID, KBEQ-AM is simulcast with KBEQ-FM which operates at 104.3 MHz with 100 kW ERP. KBEQ-AM is 1 kW day and 500 W night with a three tower array for both the day and night patterns. The main lobe of the groundwave is at a bearing of 212° from the tower site in Blue Springs, MO. The main transmitter is a 1983 model Harris SX-1 which feeds a 1983 Harris Phasor.

Happy DXing,

R. Lee Wheeler
Chief Engineer
