

A SERVICE OF OKLAHOMA QUALITY BROADCASTING CORP.

Feb 13, 1976

Dear Wayne,

We're always glad to hear reports from our audience, and especially from out on the fringe. I'm sorry for the delay on returning your conformation, but as you know engineers stay very busy sometimes. Our transmitter is an RCA BTA 1R1, capable of 1000 watts output, which we radiate into 2 vertical antennas. Efficiency is about 70% and our phase angle for day pattern is -66 degrees, and nighttime phase angle is 0 degrees. We protect 4 stations on 1380 Khz, and I would send you a radiation chart of our coverage area, only I don't have one available.

Thanks again for the report on our station.

Yours Truly
