Aurora, CO 80013

This letter confirms reception of KAMA Radio, El Paso, Texas U.S.A. on January 6, 1986 at 4:56 pm. KAMA operates on 750 KHz with 10 Kilowatts daytime directional array. At sunset we switch to a four tower directional array with a power of 1 Kilowatt. During the daytime hours KAMA operates with a two tower array.

KAMA signed on July 11, 1985 with a new Harris MW-10B transmitter after moving from 1060 KHz. KAMA signed on in the late sixties on 1060 KHz as a daytimer and stayed there until last July. We program in Spanish 24 hours every day of the year.

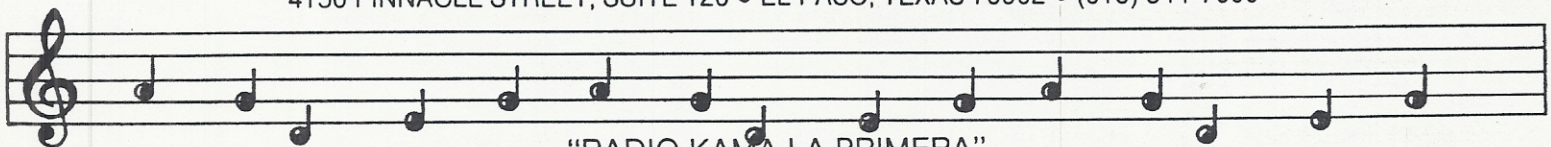

Let me say THANKS for the reception report and good luck. Enclosed please find a copy of our coverage map as well as the latest bumper sticker.

Best wishes,

Kevin L. Jenkins
Chief Engineer
