AM 1070 KOPY

Dear DX Fan

Thank you for your interest in our station. We are happy to notify you that your report is correct.

KOPY operates with 1000 watts day and night. We use a two tower directional antenna at night. Our directional tower is 225 feet tall.

We use a Gates "1-G" transmitter, and we also use modern audio processing to insure high modulation and good quality. AM broadcasting is becoming very quality conscious.

Atop one of our directional towers, we have mounted a four way circular FM antenna. The tower is 333 feet tall and in addition to being part of our night-time directional array, supports our FM station's antenna. Our FM call letters are KXMS. We operate at 92.1 MH. with an E.R.P. of 3 KW. KXMS uses a sparta 2.5 KW transmitter. It is fed by a Schafer automation system using "Century 21" adult contemporary rock.

KOPY and KXMS both operate from 6 AM until Midnight. We test frequency monthly, and occasionally operate non-directional for emergencies. KOPY broadcasts in the Spanish language daily from 8 AM until Noon.

Thank you again. Happy listening!
