## KDXU <sup>AM 890</sup> RADIO

Wayne Heinen  
4131 S. Andes Way  
Aurora, CO 80013

Dear Wayne,

May 19, 1988

This letter will confirm your reception of KDXU which you reported on November 30, 1985.

KDXU began operation as a 250 watt station on 1450 KHz in the 50's. This was later increased to 1,000 watts. Finally, after a number of years in the courts, KDXU was allowed to construct a new facility on 890 KHz with 10,000 watts, using a directional antenna at night to protect WLS in Chicago. They are the clear channel station on 890 KHz. This construction was completed in late summer 1985. Testing and tuning was completed in late October and we commenced programming on November 18, 1985, on our new frequency.

Since that time we have received a number of reception reports about the distance that our new station reaches. If you are interested, I have drawn some of the operating parameters for the directional antenna below.

Thank you for listening and sending your reception report to us.
