Mr. J. W. Brauner
23 Howard Ave.
Williamsville 21, New York

Dear Friend,

Many thanks for your letter of August 22nd.....

Yes, the partial verification of our program content for the frequency test period of that morning is correct. Apparently our signal was doing pretty good that morning as I also received a letter from a listener in Minnisota.

Our equipment is composit ... including the console, limiter, and transmitter. The tower is of uniform cross section steel pipe and 170 feet high.

In the event you ever take a vacation trip into California, be sure to stop by for a visit.

Regards,

Lyman Treaster
