Northern Supplies' Radio Station

Capitol Theatre Building

North Bay - Ontario

December 7/32.

J. W. Brauner, Esq.,
17 East Spring Street,
Williamsville, N.Y.

Dear Sir/-

You will please accept my apology for not answering your most interesting communication of November 24th sooner. The fact of the matter is that one of our representatives was carrying it around in his pocket for a number of days showing it to newspaper reporters, and interested friends. I have finally managed to get my clutches on it and it gives me great pleasure to acknowledge its reception.

For some peculiar reason or other this station persists in pounding into the New England and adjacent states, particularly when we conduct any sort of unofficial DX test. On the particular evening which you mention we had been having trouble with a tank condenser spilling over. After making some adjustments we decided to split the ether for a few hours overtime just to give the entire mechanism a test. Having received permission from the Department of Marines and Fisheries, we also have been experimenting with frequency channels and that is probably the reason you found us on 950 KC instead of 930KC.

We have a new 100 watt, 100% job under construction and it should be on the air by Christmas time. You picked us up on our present equipment--50 watts, Hartley circuit--which is anything but efficient. We expect our new equipment to give us 400watts on peak modulation and as a result you should have no difficulty in contacting us provided we are successful in locating a channel that will allow us to operate without being cut to pieces. At the present time that is our chief difficulty.
