Williamsville 21,  
N.Y.

Dear Sir : -

In reply to your letter dated September  
the 17th 1952.

On Friday Morning the 12th, we were verifying  
our directional pattern changing from "OMNI" to "DIRECTIONAL"  
every minute between 3.30 to 5.30 EDST.

At that time, an engineer was out on the  
road at a radius of about five miles taking signal  
strenght measurements using the ratio between day  
and night signals to plot out our directional  
cardioid pattern. Our night pattern is so shaped  
as to protect four american stations on the same  
frequency and located in a direction Southwest from our  
station.

That would explain why our signal received  
in your location would not show any difference between  
our day and night patterns.

Thanks for your report.

13's to you.
