Mr. J. W. Brauner  
17 Spring Street.  
Williamsville, New York

Dear Sir:

Dear Mr Brauner:

I am very pleased to be able to verify your reception of our special DX Program for the NRC. Thank you for your interesting report. I am inclined to agree with you that for 250 watts we covered a great deal of territory on the broadcast. From the input to our final stage I doubt if we are putting out a great deal more than 150 watts if that. This is due to the fact that our antenna is supported by a cedar pole. It is a vertical of wire and the pole is close to the wire and I am inclined to think that the proximity of the pole changes our antenna resistance when it is wet and gives us a false power indication. Add to that the fact that we have already reduced power to the level recommended by the commission and you will realize that we are really low powered here

In line with our station policy I am returning your postage but I assure you that we appreciate the thoughtfulness which prompted you to send it

Sincerely Yours,

*C. J. Crane*
