Joseph Brauner,
17 Spring St.,
Williamsville, New York.

Dear Radio Friend:

Please accept our thanks for your report and comments on the test program from our experimental station 9 XF.

This station is being operated as an experimental station during the preliminary testing period. When the tests are completed, the station will replace our present stations WENR and WBCN. These stations are owned and operated by the Great Lakes Broadcasting Company of Chicago, Illinois.

The new station is located on a 40-acre farm, 22½ miles southwest of Chicago. The equipment is housed in a two-story brick building. The towers are 300 feet high, and spaced 700 feet apart.

The equipment consists of a 50,000 watt, crystal controlled transmitter, built by the General Electric Company, and sold to us through the Radio Corporation of America.

We are operating on a frequency of 1040 kilocycles, or 288.3 meters. This frequency may be changed when the new allocations are made in April, but you will be able to find this station listed under WENR and WBCN.

The Studios of the Great Lakes Broadcasting Company are located in the Straus Building, 310 South Michigan Avenue, Chicago.

We will probably be on the air with test programs nearly every night for the next two or three weeks, and we will be glad to have your comments on the quality of our transmission.

Very truly yours,

E. H. Gager

E. H. GAGER,
Chief Engineer.
