

WKOX

1000 WATTS

1190 ON YOUR DIAL

Framingham, MASSACHUSETTS

April 26, 1947

Mr. J. W. Brauner
23 Howard Avenue
Williamsville 21, New York

Dear Mr. Brauner:

This will verify your report of reception of WKOX on the night of April 18 when we were conducting equipment tests.

WKOX operates on a frequency of 1190 kc with a signal output of 1000 watts. Our transmitter is a Raytheon RA-1000 and uses a pair of 833's in the final stage. The final stage of the modulator is also a pair of 833's. Our antenna is a Wincharger Type 101, and is 210 feet high. Surrounding the tower is a copper screen 30 feet square and we have 120 radials 200 feet long (#10 bare copper wire) radiating from the base of the tower.

Thank you very much for your interest in WKOX and any time you happen to be in this area, please feel free to stop by and say hello.

Very truly yours,

Francis W. Bartol
