Dear Sir;

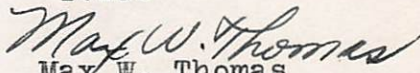

Thank you for your report on reception of our station during daytime programs on May 17. I am pleased to report that your report coincides with our logs.

Just a little dope on our installation here. We have all new Raytheon equipment with a 1,000 watt transmitter on 1210 K.C. The antenna is a 215 ft vertical windchargetower. The transmitter is approximately $4\frac{1}{2}$ miles from the studios.

Your report is very helpful to us. With the other reports from DX'ers like yourself, we can better determine the characteristics of our new installation.

Lots of luck on your DXing hobby.

Yours

Max W. Thomas
Chief Engineer
