

MARSHALL, MINNESOTA

Greetings, DXer,

Your letter of Nov. 30, 1946 was greatly appreciated. We are proud and happy to know we have reached you. KMHL operates at 1400 Kc. with 250 watts. We have a Raytheon RT 250 Xmitter using high level modulation with a pair of 810's for output. Our antenna is a 200 foot, self-supporting vertical radiator. Our studio equipment consists of a Raytheon RC11 console and Rek-O-Kut turntables with Cobra tone arms.

Thanks again for writing.

Yours truly,

Corwin Ost,
Chief Engineer

Since we began Program tests on Nov. 29 yours was early in our list of DX's. By the files it looks as if you came in first during Prog tests. 3 others beat you during our equipment tests. We make freq. checks 2:30 to 3:00 A.M. CST Tuesdays so will be looking for another letter. Wf L B gives us a lot of competition all over the east. I'm glad we came in so well
195 Ost
