J. W. Brauner;

Thanks for the signal report on March 28, 115 to 130 am. Our Engineering Log confirms your report. We have had reports on the above date from Panna, Tenn., California, all of which mention the Chicago station WEDC.

We will be testing again on April 18th or 25th at 1:15 MST. I would be interested in knowing if you happen to catch us at that time on a repeat DX.

The transmitter here is an RCA 250E, about 20 years old, with an "amazing" frequency response. (flat from 25 K to 18,000 K) Antenna is 150' guyed, shunt-fed. Here's wishing you good DXing.

M. Bowles, Mgr.
(W5SGC)
