

RADIO STATION WAKU

LATROBE, PENNSYLVANIA

250 WATTS
1570 KILOCYCLES

P. O. BOX 208

Feb. 25 1953
Latrobe, Pa.

Dear sir:

Regret the delay in answering your letter of January 3 1953. But the typewriter from the transmitter was at the repair shop and just returned. I am indeed pleased to verify your picking up our small station up in N.Y. However, I am sending out a verification also to James E. Hill 70 Close ave. Toronto, Ontario who also picked up our signal. I do think that if you would try just before sign-off in the evening you would meet with better success. The part which you picked up was our sign-on and trade-mark. Radio Latrobe, Serving the Latrobe, Ligonier, Derry areas.

We are a relatively new station operating daylight with 250 watts. Single radiator 152 feet high and we are shunt feeding the Antenna.

If there is any more information you might like just drop me a line and I might be of service.

Yours truly,

Bernard W. Guidos C.E.
