Mr J. W. Brauner
P. O. Box 22
Valer, Pa

Dear Mr Brauner:

I wish to personally thank you for your signal reports and interesting comments on our new station. I am surprised you are hearing us as well as you report. your good location and 5X99 apparently is a good location for B.C. King.

WGRP is a two tower directional, the main lobe is beamed 10° East of true North. Our towers are 206' plus 42' of top loading, for elevation 1223' putting top of towers at 1429' above sea level. The transmitter is a new Gates BC 1T, feeding the 2 tower phasor in turn feeding power to the dog house antenna towers. Have about 14 miles of #10 copper wire in ground system, plus 1000 lbs of #4 copper strip interconnecting towers, pedestals and bonded to transmitting equipment and neutral of power line.

Best Regards + etc,
Ken Anderson, Portman + Chief Eng.

Respect from Coll
