Williamsville 21
New York

Dear Sir,

This is to thank you for sending in your report of hearing W L I L, November 7, 1950, and to verify your report. Our A.M. equipment is Gates. Our transmitter is the new Gates BC-1F-1-KW Transmitter, operating on 500 watts. The antenna is a .2 WL-284 feet tall, and is located on top of a hill. A.M. is daytime, only.

We just finished installing a new G.E. 3-KW F.M. Transmitter to use in conjunction with the A.M. and to use in the evening. The F.M. antenna is an Andrew, 4 bay Multy V., mounted on the side at the top of our A.M. and F.M. tower, and has an ERP of 8.8. KW. The reason for the test was to see how well the A.M. and F.M. worked together.

Sincerely,

William T. Newton
