23 Howard Ave.  
Williamsville, N.Y.

Dear Joe,

Thanks so much for your report taken of WSIG. Even though your attempts have been only moderately successful due to our limited air time and interference from other stations there is no doubt but that it was WSIG you heard at sign on. Although you mentioned no specific date that you tuned in, this letter will verify your reception report in general. I guess we have heavy competition on 790 after 6 A.M.

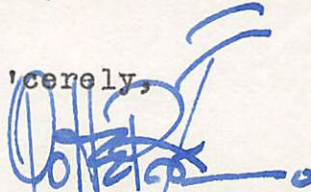

As to the frequency check you mentioned on Sat. Oct 2, I'm afraid it was some other station. We did pull a proof of performance check about a week ago, but other than that we have not been on the air. Glad to know KABC is coming through---I'll have to try for that one myself as I don't have it verified. My National 12 tube rao-7 is being given a physical right now, but should have it back soon.

If I can get permission to do so, I shall run lots of DX programs throughout the winter, as we live here at the radio station in a modern upstairs apartment, and it will be just as easy to put on a DX program as getting up to DX. Its nice to have a choice.

I am starting to dream up a nice verification to send out, and when they are complete, I'll send you a copy. It will probably be photos printed by offset or something.

Thats about all from here. If you ever get down this way please drop in and say hello. The only fellow I've met from NRC has been Fred VV.

Sincerely,

  
Phil Potter  
Assistant Mgr.
