ACCESS TO WORLD MARKETS

Saint John is one of North America's great ports. The large, well-sheltered harbour, with its ultra-modern concrete wharves and fireproof metal transit sheds, is open twelve months of the year. It is linked with every continent by steamship services.

Canada's two trans-continental railways move passengers and freight in and out of busy Saint John. The waterfront, on which excellent sites have been set aside for industries, is equipped with facilities which assure the quickest and most economical handling of all types of cargo.

Saint John is closer by rail to the main sources of freight origin and freight destination in Canada and the United States than any other Canadian Atlantic port and offers manufacturers easy access to domestic as well as world markets.

REVERSING FALLS RAPIDS

At Saint John the tremendous rise and fall of the water level amazes visitors. The rise and fall of the tide here is 28 feet.

And at Saint John too, the world famous Reversing Falls Rapids display their interesting capacities. Running not precipitously but nonetheless definitely, the falls flow in one direction as the powerful tide from the bay flows inward, forcing the waters of the Saint John River uphill.

Then, as the tide retreats, the falls reverse their direction and flow the opposite way, through the Saint John Harbour and into the Bay of Fundy.
