Dear Sir:

This will serve to confirm your reception of WTHB on the morning of November 18, 1963.

WTHB operates on an assigned frequency of 1550 Kc/s, with a power of 1,000 Watts. we are located on the North bank of the Savannah River, about a mile North of Downtown Augusta.

You say that you used a tape recorder to nail down the reception. If possible, I would like to get a copy of that tape, as I would like very much to hear what we sound like in Massachusetts.

Thank you for your report of reception. We always like to hear what we sound like in the DX department. We have done some work on our 190' vertical antenna, and the DX reports are increasing by leaps and bounds.

Thank you once again for your concise report of our equipment test.

Sincerely,
Lewis Linson
Lewis Linson,
C. E. WTHB
