

POWEL CROSLY, Jr.  
*President*

WSAI  
W8XAL

Dear Radio Friend:

This is to verify your report of reception of Station W8XO, the new Crosley high powered experimental broadcast transmitter.

This high powered station operates under the call letters of W8XO on WLW's frequency of 700 kilocycles, (428.3 meters), with a power of 500,000 watts. The Federal Radio Commission has authorized test of this transmitter daily from 1:00 to 6:00 A. M. Eastern Standard Time. We do not know definitely when it will be possible to use this station for regular full day operation as WLW.

We are enclosing a bulletin giving a brief description, and photographs of W8XO and the vertical radiator, which we believe you will find very interesting.

Thanking you for your interest in writing to us and trusting that you will enjoy good reception from WLW and W8XO, we remain,

Very truly yours,

THE CROSLY RADIO CORPORATION
