Omaha, Nebraska 68114

Dear Rolland,

KBIZ was transmitting a signal from 12:30AM to 12:39AM CST on December 9, 1977. We were conducting our monthly external frequency measurement test which falls on the second Friday of each month.

KBIZ operates on 1000 watts daytime and 250 watts nighttime. However, during testing periods we can and do use 1000 watts. During December 9th tests we were using 1000 watts of power modulated by a 1000 hz tone. The ID announcements were made at the times mentioned in your report.

I appreciate receiving your excellent reception report.

Sincerely yours,

Wm. Willis
