MR. ROLLAND L. LINDBLAD
1017 N. 90th STREET #2
OMAHA, NB. 68114

DEAR MR. LINDBLAD;

I am happy to report of your verification of our station frequency check on June 16, 1976.

I am very sorry that I have not reported to you sooner, but our Chief Engineer is a very busy man, so I have taken over, so to speak, the job of filling out the QSL verification letters. I, myself, am an avid DX'er myself, however, I do most of my DXing on the Shortwave bands. Thank you for your understanding of the sluggish verification and hope you will forgive me.

Enclosed, you will find a map of our daytime coverage area and on the reverse side an old rate sheet. Also you will find an auto window sticker of KEMM Radio.

BELOW is a specification of the station:

CALL SIGN: KEMM

POWER: 250 Watts Daytime, CLASS IV

FREQUENCY: 1510 KHz.

EQUIPMENT: TRANSMITTER; Gates BC 1G

ANTENNA: Series excited vertical, 132 feet overall height.

Thank you again for the reception report, accept my apologies for a sluggish return, and I hope to hear from you again soon.

Sincerely,

Dewayne D. Carver
D.J. and P.S.A. Director

DAC. / ddc
