Mr. Rolland L. Lindblade

1017 N. 90th. Street #2

Omaha, Nebraska 68114

Dear Mr. Lindblade:

This letter is to serve as verification of your reception report of the January 9, 1976 transmitter test of WWST.

Reception reports are always interesting, and in some cases even amazing. We appreciate your interest.

On this Friday morning test, the transmitter was on and off several times, so it is not surprising that you would rather suddenly lose our signal altogether. Our normal power is 1,000 watts, but what is amazing is that at the time of your reception, we were broadcasting with our pre-sunrise power of 500 watts. Our Friday morning tests are fairly regular, so you might wish to alert some of your friends to perhaps be on the alert if we should happen to be coming your way again. Enclosed is a coverage map. Thanks for your interest.

Sincerely,

Michael J. Epler
Chief Engineer, WWST/WWST-FM
Wooster, Ohio
