NEW ZEALAND BROADCASTING SERVICE.  
Station 1YZ,  
P.O.Box 298,  
ROTORUA. - NEW ZEALAND.

7th November, 1951.

Norman L. Mac Guire, Esq.,  
434 North Maple  
Albuquerque.,  
New Mexico, U.S.A.

Dear Mr. MacGuire,

We are in receipt of your letter dated September 20th, and wish to thank you very much indeed for your interest in reporting on the reception of 1YZ.

It appears that 1YZ was the Station you heard, although your times are not in every instance correct for the Programme you heard. It appears to me that the times you have given are actually out by one hour. For instance, you mention time signals at 2000 followed by weather forecast. This would be correct for 2100 N.Z.T. Then you mention Live Stock Reports etc. for 2005 when in fact these reports were broadcast on that date at 1905. I would, therefore, be prepared to confirm that it was 1YZ that you heard on the morning of September 20th.

1YZ was opened in April 1949. It is a 10 k.w. Station manufactured by Messrs. Amalgamated Wireless, Sydney, and the Transmitter is situated on the Pacific Coast, 35 miles from Rotorua. The 500 foot lattice steel mast is the aerial system. Since we opened, we have received excellent reports from all the Islands in the Mid-Pacific and as far afield as the Atlantic Coast of America.

Thank you again for your report and with best wishes from the staff.

Yours sincerely,

A handwritten signature in dark ink, appearing to read 'K. Collins', with a long horizontal flourish extending to the right.

Station Manager.
