

KMON

5000 WATTS
AT **560** KC.

The **Montana Farmer-Stockman** Station

GREAT FALLS, MONTANA

February 17, 1949

Mr. Norman L. Maguire
434 North Maple
Albuquerque, New Mexico.

Dear Sir:

This is to verify your reception of KMON during the test period, April 27, 1948. As you surmised, we were working the bugs out of the modulator and associated equipment in the transmitter.

The equipment at KMON is almost all RCA, the transmitter is a BTA-5-F, 5000 Watts, plate modulated. The antenna system is a 3 element array (for nighttime operation) using one of the towers for daytime operation. When you heard us we were using one tower, non-directional.

I notice by your letter that you have an amateur call. The boys on the technical staff of KMON all maintain amateur calls. They are W710C, W7MYT, W7NAH, and the writer W7CRD. Give us a buzz when you hear us CQ.

psø pardon the writing,
my mill out of order
7CRD

Sincerely,
E. B. Bunker
Transmitter Supervisor
