Mr. Norman L. Maguire  
434 North Maple  
Albuquerque, New Mexico

Dear Mr. Maguire:

I am sure glad to hear that you got located in Albuquerque with both a job and a place to live. Since last talking to you we have had openings at KOAT, and still have openings at KGAK in Gallup, and KTRC here in Santa Fe.

Thanks a lot for the report of reception of KTRC on November 22 nd. This is the first written report we have had from Albuquerque but we have been told that we are heard at different times, and with good signal strength considering our 250 watts on 1400 Kcs.

If you have never been up to our station I think you will be interested in the installation. The equipment is RCA all the way except for Presto Recorders. The antenna is a 175 foot self-supporting Lehigh set on a 30 foot steel base so as to bring the base of the antenna and the ground wires above the roof of the adjoining buildings; the outer ends of the ground wires are tied to a No. 4 copper wire suspended between steel poles. The studios and control room are finished in the latest sound control methods as developed by Dr. Boner of the Uni. of Texas.

If you ever get up this way be sure to stop in and we'll show you around. Thanking you for your report and your interest, I am,

Yours truly,

Milton W. Woodward
