March 12, 1947

Mr. Norman L. Maguire
185 Williams Street
Glastonbury, Conn.

Dear Sir:

It gives me considerable pleasure to verify your report as being correct in connection with our equipment test transmission on the morning of February 19th.

WHWL started commercial operation 7 A.M. on February 20th and operates daily from local sunrise to sunset. The transmitter is a kilowatt Raytheon which works into an open wire transmission line using six wires.

The tower is shunt fed and the associated tuning unit is mounted on a platform 30 feet above the ground. This design was necessary due to the fact that we are in a flood area by the banks of the Susquehanna.

Thanks for your report and I wish you lots of luck in your future D-xing.

Very truly yours,

B. T. Marshall
Chief Engineer
