Dear Murray,

We were pleased to receive the report from you of our frequency check. The announcements were put on tape recording about a year ago to leave me free to write the frequency deviation on the log each minute. When the report comes in from our monitoring engineer in Birmingham, Ala. I check the time and deviation with my log and see if our frequency monitor is right. The music you heard is the Three Suns. I made the ID's. Thanks for the compliment. Our frequency check is regularly each first friday morning at 2:15 EST.

Etowah is a railroad town located halfway between Knoxville and Chattanooga and is about 60 miles from each. We are near the Great Smokey Mountains and the Copper Basin.

We have received many reports from as far away as Toronto, Canada as well as different states. Looking at a map I see that Omaha is as far away as Toronto. We use practically all Collins equipment and it does a very good job with a minimum of maintainance.

Thanks again for your report and if you are down this way be sure to stop to see us.

Sincerely,

Henry Hoffman
