undoubtedly your signal of KVRS on regular broadcast time, Saturday, November 30, 1963 from 6:58 to 7:32 am MST, was correct.

We operate on 1360 kc from 7:00 am to 10:00 pm except Sundays which is from 8:00 am to 8:00pm.

Xmtr is a Collins type 20-T, direct crystal control. Last radio stage: two 500 watt vacuum tubes for high level modulation. Maximum rated carrier output: One kilowatt of power. As of sign off time last night, Xmtr had 91, 268:57 hours of time on the air.

Antenna consists of two, 200 ft. tri-angular uniform cross-section guyed, series excited, vertical type. Spacing is 560 ft. on a line bearing 192° true. North tower used for non-directional operation between sunrise and sunset local time. Night time operation is 500 watts directional pattern.

Our most distant Dx report came from New Zealand outside the U.S. Within the country Reading, Penn. is the most distant. This is the third report from within the State of Wyoming.

Thanks very much for the report it comes as quiet a surprise.

Sincerely

Clay
