

*Radio Station W O M I, Owensboro, Kentucky*

OB-H2356

Your interest in furnishing us with a transcript of your log of reception of WOMI is greatly appreciated. It is indeed gratifying to know that we were heard in Bradford. This test program was made while shaking down a new 427 foot a.m. tower sectionalized at 75 feet, and fed at point of sectionalization. This is in effect a Franklin type of radiator. The tower also supports our 8-bay f.m. radiator. We are operating 250 watts a.m. and will very soon be on 60,000 watts erp f.m.
