Grand Rapids, Michigan
15 December, 1948

Mr. S. R. Morss,
Rt #3,
Bradford, Massachusetts

Dear Mr. Morss:

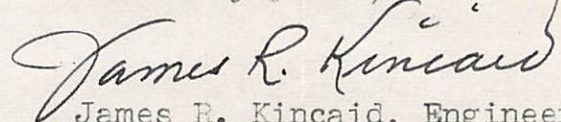

This is a verification of your reception report received by us. Your report checks with our log on December 4. At that time we were test programming for a frequency check. We were interested to know that we reached as far as Bradford.

We are transmitting with a Raytheon 1000W transmitter, which employs 833's in both modulator and final stages. Our tower is a guyed Andrew tower which is 205' from ground to tip.

Appreciated your report very much as it is always of great interest to us to know just how far we carry.

Thanking you, I remain,

Sincerely yours,

James R. Kincaid, Engineer
