Bradford Mass.

Dear Mr. Morss :

Glad to receive your DX report. I would like to say your report is "VERIFIED". We have been so busy here with our new station we couldn't find time to answer all our mail at once.

We have gates equipment all the way, Our antenna is shunt feed with the slant wire taped on the tower at about 40ft. The ground system consist of 120 radials 200ft long and 120 radials 20ft long. The studio and transmitter is combined and located about 2 miles from the center of Clovis.

Clovis is a town of about 25,000 and is a railroad and cattle center, Located 10 miles from the Texas line on the planes of eastern New Mexico.

We really do enjoy receiving DX reports, and it seem WEDC in Chicago has been holding us back some, but we have received reports from most all the states and Canada. Thinks again for the report and we will try to cooperate with the DX'ers.

Very truly yours

Clayton D. Fuchs
Chief Engineer
