Bradford, Mass.

Dear Sir;

Thank you for your report on our signal. Your letter has been checked against our log of November 15 and is verified. Our station uses a Collins transmitter to feed a kilowatt into a tower 285 feet high. We just put in a new ground system and these reports we are getting makes it seem well worthwhile. We run a frequency check every third Tuesday of the month from 2:30am to 2:40am E.S.T. and will be glad to have you listen in again sometime.

Yours truly,
C.J. Modlin
C.J. Modlin, C.E.

a PAL of yours
