Dear *Bill*

Thank you for your QSL Report. KCEY is a 5 kilowatt regional service station. We have two directional patterns. Daytime uses two 185' towers with major lobes at 70° and 260°. Night time we utilize three 185' towers with a major lobe at 250° and numerous minor lobes. We utilize a state of the art, Harris MW5, pulse duration modulation transmitter.

Sister station KMIX-FM operates at 1.6 kilowatts ERP with a 390' tower. Modern Harris equipment is used throughout.

Your reception of KCEY / ~~KMIX-FM~~ on (DMY) 21 / Nov / 81 is:

- Confirmed
- Denied, reason
 - Incorrect information
 - Inadequate information, not identifiable
 - Other _____

Thanks again, and good luck.

Yours Truly,

Bill Croghan
