Dear Mr. Nittler:

Glory Be! That's some SWL Report. We are 10,000 watts daytime and 250 watts nights, and extremely directional in both modes. Our antenna pattern is generated by a very complex 6-tower marconi array. This is necessitated by our having to protect KMPC in Los Angeles. They broadcast 50,000 watts days and 10,000 watts nights so you can see what kind of an antenna pattern problem this generates.

Your reported programs do coincide with our programming at that time so we are pleased to send along this QSL.

I am enclosing a copy of our current broadcast schedule and a copy of our high and low power broadcast schedule.

Many thanks for the report, and happy SWL.

Sincerely,

Ed Smith  
Assistant Engineer

ES/gm
