Maurice:

I'm sorry your reception was so poor during the hour of 0030 to 0130 on Monday Feb.6,1956, but from what you've mentioned in your letter, you did right well with the table model Emerson and built in loop antenna, golly you did right well boy. Yes I mentioned all the data you logged alright and a lot more about this wonderful Shasta Cascade Wonderland of ours. Geneva sounds like a nice little town with a population count that tends to let a fellow feel he's part of the community, The trouble with a big town or city, a guy gets to feel he knows so few and is just a "citizen" one of many. But then the sports and such around here make up for that. Yes I am well aware that Nebraska is known as the Corn Husker state because a fellow I once went around with was from Nebraska and he always talked it up. Thanks for the good luck wish and may I say the same for you. Keep up the listening and again ~~my~~ I say you did right well with your table model set.

Best regards

George O. Wussow
