

Dear Bill

Your monitoring was accurate.....Since you are about 250 or so miles air distance, and through two mountain ranges plus som rough country, you must have been getting the bounce off the ionisphere...

About 25 years ago I received a letter from Christchurch New Zeland/// and he had a very accurate commercial....about 90% accurate.....

I dont know how these things happen but they do and thanks... My tower fell and part thry the ruuf of my ffice and for four month I have been repairing and got another transmitter....a 250 1000 and while you were listening I was on 250 instead of full power of a KW It is a Gate transmitter that that burns 833 in final same as my o d Western Electric.....(cOnverted..)

Again thanks for writing/.....I am the guy who put the first T V station in Durango, butned out, and sold the permit.....
