Maurice W. Nittler
Box 94
Geneva, Nebraska

Dear Mr. Nittler:

We received your letter regarding frequency monitoring test on March 21st. It was with a good deal of interest that I read your letter and noted that you are a member of N. R. C. Please accept this as confirmation of your reception of KLVC on a test signal broadcast.

I was wondering, if by any chance are a "Ham", or if you know any amateur radio enthusiasts in your area. If so could you furnish me your frequency and call letters, or those of Hams in your area. If you or any other hams would like to set up a contact schedule, our call letters here are "KWØAEH" and our frequency is 3.714 megs, with peak power of 50 watts.

Leadville is situated 112 miles SW of Denver at an elevation of 10,200 feet, with a population of about 5,000. Principal industries are mining and milling of ores (13 metals are mined)..Also limited ranching and timber interests.

Hoping to hear from you regarding the Ham operation.

Yours truly,

Howard S. Eldridge
Howard S. Eldridge,
Chief Engineer Station KLVC.
