500 WATTS

"Kleanest City In Iowa"

WASHINGTON, IOWA

January 12, 1965

Maurice W. Nittler
4590 South Julian Street
Englewood, Colorado 80110

Dear Mr. Nittler:

I am sorry that I did not return an answer to your letter sooner than this.

This is to confirm your reception of KCII Radio on the morning of January 3rd, 1965. We were on the air for the purpose of conducting a frequency monitoring service in Lee's Summit, Missouri. These tests are conducted once a month from 12 to 12:15am, local time, on the first Sunday of the month.

Interference of our signal is understandable as there are several stations occupying 1380kc, including KWK St. Louis.

We operate with 500 watts, and have been on the air for a period of three years. We use entirely all Gates equipment, at both the studios and at the transmitter site, which is located a mile from the studios. Our antenna is approximately 151 feet.

Enclosed, please find sales coverage map, which will give you a small idea of the trade area, and our minimum coverage.

Sincerely yours,

Jerry J. Johnson
