Mr. Maurice W. Nittler
2818 South Cherokee
Englewood, Colorado

Dear Maurice:

This letter will verify your reception of a special DX Program broadcast from WDBQ in cooperation with the National Radio Club. This program was broadcast on Monday, January 26, 1959, from 2:00 AM to 3:17 AM CST.

Radio Station WDBQ operates on 1490 Kilocycles with a power of 250 watts unlimited.

We regret that interference on the 1490 spot on the dial was heavy during the period of our DX Broadcast causing you some difficulty in hearing our special DX Program. The same interference which gave you trouble was also causing many other DXers across the country a lot of "headaches".

Even though your reception report is quite meager, we believe it is sufficient to send you this verification letter of Station WDBQ. Your item listed at 2:50 AM of a man talking and mentioned something about 5600 feet, is very much correct. One of our announcers, Bill Mason, was giving "Facts about Dubuque", and was telling about Dubuque's Municipal Airport stating that the concrete runways at 150 feet wide, one is 5600 feet and one is 4600 feet long. We do hope next season when we plan another DX show, that you'll get an even better log of our 25-year old station.

May we thank you for your report of reception of this special program, and assure you that it was a pleasure for WDBQ to cooperate with the National Radio Club.

Sincerely yours,

Terry Dorsey
For: Terry Dorsey,
Program Director WDBQ
