Mr. Maurice W. Nittler
Box 94
Geneva, Nebraska

Dear Mr. Nittler:

Thanks very much for your nice report on reception of WSON on the morning of Nov. 15. I really enjoyed having the opportunity of scheduling the program for the National Radio Club, and would be only too glad to repeat it at any time the Club so desires.

I have received a lot of reports from all over the country, and was surprised that a little 500 watt could put out a signal so far. It was only too bad the other station had me covered up much of the time with a tone. That station has been identified as CJBC in Toronto.

Several months ago, in May to be exact, I received a report from you on reception of WSON. At that time I was installing a new transmitter and was extremely busy, and somewhere in the shuffle I lost your letter before I could send you a letter of verification. I felt badly about that, because I certainly appreciate all DX reports, so I was gratified to receive your latest report.

We have installed completely new equipment here, and have moved our studios down town, and as I am the only engineer, I had to do all the installation, so you can imagine how busy I've been.

After checking your letter, I take this means to verify your reception of WSON on Nov. 15 from 3.30 to 4.00 AM CST. If I can be of further assistance, please let me know.

Sincerely,

D. E. Gibson
Chief Engineer
