October 27th, 1978

Dear Mr. Nittler;

We are very pleased to certify your reception report of our Le Pas station, C J A R on 1240 Khz. (1000 watts day; 500 watts nighttime)

We are extremely lucky to be able to obtain a fine ground-system in this 'very 'rocky' Province of Manitoba.

This contributes greatly to our effective output pattern.

The population of Flin Flon (CFAR; 10,000 Day; 1000 nighttime) is approximately 10,000 with the major industry being provided by a huge Copper-Zinc-Nickel mine situated on the outskirts... The smoke-stack is 825 feet high!

Being an active Amateur Radio Operator (HAM) I'm pleased that we were able to install our 2 metre (144 to 148 mhz) transceiver and antenna at the 725 foot level... This gives us in excess of 100 miles solid mobile radio communication.. In addition, I've got a 50 foot tower for my 20 metre beam....

You mentioned that you quite often travel around Canada; ; ; ; ; Possibly you would like to visit Flin Flon during the annual trout festival or Le Pas during the annual Dog-Derby-Races....

The Lions Club is also very active hereabouts..... Two of our staff members are in the club.....

I'll have to signoff for now,

thanks again for taking the trouble to let us know what our signal is doing these days.

Sincerely,

Barry Ogden,  
Chief Engineer CFAR, CJAR,  
& CHTM, Thompson, Manitoba.
