## NEWS BUREAU

December 15, 1958

Mr. Maurice W. Nittler  
2818 So. Cherokee  
Englewood, Colorado

Dear Mr. Nittler:

I am assisting our engineering department in replying to all D-X reports on the Dec. 12th test program staged during our proof-of-performance ratings series.

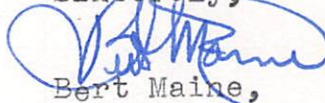

Your report is hereby verified as being correct in every detail. We greatly appreciate your report and comments. We also noted with great pleasure that you stressed the fact that there was no interference with our "carrier" at that time. Radio Station CKBI at Prince Albert, Sask., which also operates on 900 k.c. with 10 kw happened to be programming at that time also..sending a strong signal down our way and we feared that our signal was blocked due to this.

There is a possibility that we might stage a 1/2 hour monthly test program on a regular basis..in the event this becomes effect..we will notify you by mail that you might listen and report to once again.

KTIS uses a 300 foot guyed vertical antenna and our Western Electric transmitters are operated by remote control from our studios on the second floor of Northwestern College in downtown Minneapolis. Our transmitter estate is located at Golden Valley, Minnesota about 8 miles Northwest of Minneapolis.

The season's best wishes to you from all of us.

Sincerely,

Bert Maine,  
Dir. of News,
