

3000 WATTS FM RADIO
BETHANY (816) 425-6380

December 4, 1984

Bill Nittler
P.O. Box 724
Meeker, Colo. 81641

Dear Bill:

Thank you for contacting us in regard to your reception of our new AM station. KAAAN-AM operates only during daytime hours, with 250 watts of power, using a Harris SX-1 solid state transmitter. The antenna is the existing FM tower, which is 300 feet tall. The tower is shunt-fed, which eliminates the isolation problems normally associated with FM antennas and tower lighting on a tower live with AM RF. The antenna system is omnidirectional.

We appreciate hearing from you and hope that you will tune us in again in the near future.

Sincerely,

Gregg Richwine
Engineer
