"Serving the Shenandoah Valley"

December 14, 1964

Dear DX listener:

The large number of replies we received in response to our DX program of November 28th 1964 resulted in so much mail that I am unable to answer each personally. I am taking this method of verifying your report of reception which was much appreciated. WSIG was conducting an equipment test on 790 kc with 1000 watts output.

I have checked your report with our log and find it to be correct. The most distant report came from Jim Critchett of San Diego, Cal.

Your report is much appreciated. Season's Greetings from the entire staff of WSIG, and lots of good DX to you.

Radiocordially,

Philip J. Potter
