

Dear Sir:

This will verify your reception of WATK on June 23, 1955. This station was testing the new antenna that had just been installed to replace the original tower destroyed by a tornado the late part of May. WATK is a 250 watt station. The antenna is a quarter wave, series feed, tower. Height is 250 feet.

Very truly yours,

Robert E. Fowler
Chief Engineer WATK
Antigo, Wisconsin.
