Mr. Bill Nittler  
Box 824  
Mancos, CO 81328

Dear Bill:

I was into long distance reception of FM before I got my own station a dozen years ago. I used an offset stack of ten element log-periodic antennas on a crank up tower. (Much to the chagrin of my neighbors.) Now I only listen to KIX and besides, with all the signals in the air it would be difficult to find a frequency quiet enough to allow reception of any distant signals. When you picked us up, did you get any other signals in this area? From the Central Coast Texas used to be the most frequent skip.

I am interested in the antenna array and receiver set-up you use. Drop a line when you have some spare time. By the way, I'm pleased to verify that the reception date and program information you submitted agree with what we were broadcasting.

Yours in Communications;

Rod B. Funston
